

Showrav Karmakar

.NET Developer | SQA Engineer | Lakshmipur, Bangladesh | karmakar.showrav.42927@gmail.com | 01849951910
linkedin.com/in/showrav-karmakar/ | github.com/Showrav88

Objective

I build software, then I break it. As a .NET/React developer with an SQA foundation, I designed, built, and deployed a full-stack multi-tenant SaaS platform (ASP.NET Core 9, PostgreSQL, Dapper, React) — from database to production VPS — solo. Now looking for a Developer / QA Automation role where that same build-and-break instinct ships better software, faster.

Experience

Associate, Quantanite BD Ltd June 2024 – Present

- Validated large-scale datasets and live media content against strict client quality guidelines, applying the same attention-to-detail and edge-case thinking used in QA work.
- Coordinated with cross-functional, international teams using Google Sheets and Teamwork to track workflow and deliver consistent outcomes under time pressure.

Jr. Software Engineer, Skiff Technologies (*Contractual*) April 2024 – June 2024

- Contributed to the development of a web-based voting/election management system, working across feature implementation and defect resolution alongside the core dev team.
- Wrote and executed test plans and detailed test cases against the system to catch regressions before release, deepening my understanding of how QA and development intersect.
- Worked in a Jira-based environment following Scrum methodologies, participating in sprint planning and standups.
- Collaborated with cross-functional teams to ship high-quality releases on schedule.

Software Quality Assurance Intern, iLearnX Technologies Jan 2024 – March 2024

- Planned, executed, and monitored test cycles for web applications.
- Completed 70% of the iLearnX test cases through manual and automated testing.
- Gained hands-on experience with ClickUp, Jira, and Agile Scrum methodologies, including sprint planning and project tracking.
- Managed documentation ensuring all project details are recorded and accessible in Git and via Allure reporter.

Education

American International University-Bangladesh, BSc in Computer Science & Engineering. Jan 2020 – Apr 2024

- GPA: 3.19/4.0 (Certificate)
- Coursework:** Software Quality Testing, Software Requirement Engineering, Software Development & Engineering.

Projects

JewelryMS — Multi-Tenant Jewelry Shop SaaS *Private repo — available on request*

- Built a full-featured multi-tenant gold shop system (**ASP.NET Core 9, PostgreSQL, Dapper, React**) covering sales, inventory, purchase, pawn, wholesale, and a public e-commerce storefront.
- Added sales analytics dashboards, automated QuestPDF invoicing with QR codes, and barcode scanner/printer integration for POS.
- Implemented SaaS multi-tenancy with role-based staff login and PostgreSQL Row-Level Security.
- Deployed and manage production on a **Linux VPS** (Ubuntu, Hostinger) — Nginx reverse proxy, SSL/domain configuration, systemd process management.
- Tested core flows with **Postman** API collections covering auth, CRUD, and tenant isolation.
- Demo video (Google Drive)

SauceDemo E2E Automation Framework

github.com/Showrav88/sawglab

- Engineered a robust end-to-end automation framework using **Playwright** and **JavaScript** to validate critical paths (Login, Cart, Checkout).
- Integrated **Allure Reports** for detailed visual tracking of test execution and failure analysis.
- Conducted API testing using **Postman** to ensure backend endpoint reliability.

Technologies

Backend & Web: C#, ASP.NET Core 9, Dapper, JavaScript, React, SQL, PostgreSQL, MS SQL Server.

QA & Automation: Playwright, Selenium, Postman, Allure Reporting, Manual Testing.

Tools & Deployment: Jira, ClickUp, Git, VS Code, QuestPDF, Google Sheets, Linux VPS (Ubuntu, Nginx, Hostinger).
